The invention provides primate monoclonal antibodies which specifically bind human CD23, the low affinity receptor for 1gE (FceRii/CD23), and comprise either of a human gamma-1 or human gamma-3 constant region that binds to human Fc gamma receptors and inhibits 1gE expression. The monoclonal antibodies of the invention are claimed to be useful for inhibiting induced 1gE production for treating or preventing conjunctivitis, autolammune has meanlytic anaemia, etc. (Updated on 25-WAR-2003 to correct PR field.)

The invention relates to an isolated polynuclectide (I) encoding a polyneptide (II) comprising a portion of a colon tumour protein. A new oligonuclectide (III) that hybridises to (I) is useful for algonuclectide (III) that hybridises to (I) is useful for determining the presence of a cancer in a patient. (II) or antigen color at tumour protein, by contacting T cells specific for a tumour protein, by contacting T cells with (I), (II) or antigen-presenting cells that express (I). (I), (II), or antigen-presenting cells that express (I). (I), (II), or antigen presenting cells that express (II), so that T cells proliferate, and administering to the patient an effective amount of the proliferated T cells, thus inhibiting the effective amount of the proliferated T cells, thus inhibiting the effective amount of the proliferated T cells, thus inhibiting the cellentual and patient. (I) or (II) is useful for stimulating an immune response in a patient. (I) or (II) is useful in vaccines and pharmaceutical compositions for prevention and treatment of colon cancer and for the diagnosis and monitoring of the cancers (I), (II) or an antibody against (II) is useful as a probe or primer for nucleic acid hybridisation, and in the design and preparation of ribozyme molecules for inhibiting expression of (II) in tumour cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes a method for the intracellular analysis of a target molecule within a biological cell. The method comprises expressing within the cell a first polypeptide sequence comprised of a first reporter species capable of binding to the target molecule and a first reporter molety attached to the first binding species; expressing within the cell a second polypeptide sequence comprised of a second binding species capable of competing with the target molecule for binding species capable of competing with the target molecule for binding species capable of competing with the target molecule for binding of the first binding of competing with the target molecule for binding of the first and second binding species the first and second reporter moleties being such that on binding together of the first and second binding species the first and second reporter moleties being species the first and second reporter moleties capable of being generated when the first and second reporter moleties of onc interact; and effecting a measurement to determine the presence capable of being generated when the first and second binding species. The method is useful for the intracellular analysis of a target molecule, e.g. for detecting the presence and/or amount of target capable capable of binding of also useful for studying the circules in calls. The method is also useful for studying the circules in calls. The method is also useful for the MICI epitope of human mucinl, demonstrating the method of the invention. In this assay,

The method comprises expressing within the cell a first polypeptide sequence comprised of a first binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CAGGCTGAGGACGAGGCTGATTATTACTGTTGTTCATATACAACCAGTAGCACTTTGTTA 300

species capable of binding to the target molecule and a first reporter moiety attached to the first binding species; expressing within the cell capable of capable of competing with the target molecule for binding species appable of competing with the target molecule for binding species capable of competing with the target molecule for binding species capable of competing with the target molecule for binding species and a second reporter moiety, the first and second reporter moieties being such that on binding together of the first and second contract so as to be capable of producing a signal that can be differentiated from one capable of baing generated when the first and second reporter moieties on the capable of baing generated by the first and second binding continteract; and effecting a measurement to determine the presence or signal representative of binding of the first and second binding species. The method is useful for the intracellular analysis of a target molecule in cells. The method is also useful for studying the interactions of intracellular molecules. The present sequence represents interactions of intracellular molecules. The MUCI selecting the method of the invention. In this assay, the first polypeptide is an anti-MUCI ScFV, and the second polypeptide comprises the MUCI epitope attached to yellow fluorescent protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4365 TCCTGCACTGGAACCAGCAGTAGACGTTGGTGGTTATAACTATGTCTCCTGGTACCAACAG 4424

The invention relates to a novel antibody or its fragment, which immunospecifically binds tumour necrosis factor Delta (TNF-delta/APRIL). The antibody of the invention has dermaclogical, immunosuppressive, antiantabedy of the invention has dermaclogical, immunosuppressive, antialtammatory, antiarthratic, cytostatic, antianamic, antianamic, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, antialta, anti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   453

The fragment is used to produce a mixture or panel of 5
fragment. The fragment is used to produce a mixture or panel of 5
different specific binding members, each comprising an antibody VH
and/or VL variable domain and capable, when displayed on the surface
of filamentous bacteriophage particles or in the case of a specific
binding member comprising the DS VH and/or VL variable domain when
bood brain barrier (BBB). The panel is useful for the selection of
specific binding members with a desired property such as ability to
cross BBB, ability to bind endothelial cells or other brain cell antigen,
ability to bind intracellular adhesion molecules and to bind transferrin
receptor. The antibodies are useful in diagnosis, prophylaxis and
treatment of human or animal body, including neurological diseases, such
as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy
and traumatic brain injury and any diseases involving inflammation
cocurring within the brain or central nervous system.

The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to

The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such and traumatic brain injury and any disease, NIOS-related dementia, epilepsy occurring within the brain or central nervous system.

This invention describes a novel fusion protein (I) that has, at its N-terminus, one or more epitopes that bind specifically to autoantibodies (AAb) against the islet cell antigen IAA2 and, at its C-terminus, one or more epitopes that bind specifically to antibodies (Ab) directed against the glutamate decarboxylase GAD65. (I), also nucleic acid (II) encoding the yectors containing (II) and transformed cells, are useful for diagnosis and prognosis of diabetes mellitus type 1, stiff—man syndrome, polyglandular autoimmune syndrome or other autoimmune conditions associated with AAb against GAD65 or IA2. (I) provides a rapid and simple diagnosis of high specificity and sensitivity, capable of recognizing antibodies against both IA2 and GAD65, simultaneously. Unlike known fusions, where the GAD65 component is at the N-terminus, (II) contains correctly folded conformational epitopes that can react with most MICA autoantibodies. This sequence encodes the human autoantibody MICA-1 variable region heavy chain used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   209

The present sequence encodes a recombinant human antibody scFv. Antibody TN11 reacts with the long form of human Tenascin-C (TN-C). The epitope recognised by TN11 is located inside domain C of TN-C. TN11 is therefore only capable of recognising TN-C isoforms containing domain C (CTN-C). TN11 is useful for detecting the presence of TN-C isoforms in vitro or in vivo for diagnosing pathologies expressing the CTN-C isoforms of TN-C. It is useful for the preparation of formulations for the treatment of

The invention describes a modified virus comprising non-native polypeptides which has framework moieties each containing binding polypeptides which has altered tropism conferrated by the binding moieties. The polypeptides can be expressed in the cytoplasm and nucleus of mammalian host cell in conformation which is maintained in absence of ligands for the binding moieties, where the conformation allows the binding moiety subsequently to bind with the ligand. The modified virus is useful in therapy for the preparation of a medicament for treating tummour cells, cancer, proliferating cells, vascular diseases. Inflammatory diseases and infectious diseases such as Human immunodeficiency virus (HIV). The altered tropisms allow the virus to be used in treatment of disease in human or animal subjects, either by in convoiring treatment. The problems associated with the expression of functional non-native viral components in the nucleus and cytosol of host cells is solved by using the modified virus for the purpose. This fragment (FV) used in the creation of the modified virus containing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a new isolated nucleic acid termed ovarian specific nucleic acid (OSNA) comprising: (a) a nucleic acid molecule that encodes any of 53 fully defined protein sequences appearing as ABM51019 -ABM51010 (termed ovarian specific proteins, OSP); (b) any of 76 fully defined nucleotide sequences appearing as ABM52187-ABM52262; or (c) a sequence having at least 60% sequence identity to the nucleic acid molecule of (a) or (b). Also included are a method for determining the presence of an ovary specific nucleic acid (OSNA) in a sample, a vector comprising an OSNA, a host cell comprising the vector.

In a method for determining the presence of an ovary specific protein in a sample and a vaccine comprising an OSP or OSNA. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, steaging, imaging and treating ovarian cancer and non-cancerous disease in ovary tissue. The present sequence is an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CAGTCTGCCCTGACTCAGTCTGCCTCCGTGTCTGGGTCTCCTGGACAGTCGATCACCATC 115

The invention relates to a new modified single chain Fv antibody
containing at least two Heavy chain variable domains and at least two
light chain variable domains from the same or different monoclonal
antibodies and which is an agonie for crosslinking a molecule at the
cell surface or within the cell and thereby transducing a signal into the
cell. Also include are the DNA encoding the antibody, animal cells and
microorganisms transformed by and expressing the DNA; the preparation of
the antibodies by culture of the transformed cells, drug compositions
containing the antibodies and an assay method for the agonist activity
of the antibodies by contacting the antibodies with cells expressing the
relevant cell surface or internal molecule. The antibodies are useful for
treatment and prevention of cancer, inflammatcory disease, hormonal
disorders including diabetes, autoimmune disease, leukaemia,
disorderinism and blood disorders. The present sequence is a DNA
sequence encoding an antibody of the invention or a fragment thereof.

           antibody, and exhibits thrombopoietin (TPO) agonistic effect by causing the TPO receptor to crosslink. The antibodies are useful in preventives and/or remedies for platelet reduction-associated blood diseases, thrombocypoenia following cancer chemotherapy or leukaemia. The antibody can act as a TPO signal transduction agonist by transducing a signal into cells by crosslinking a TPO receptor to exert TPO agonism. This sequence encodes a thrombopoietin (TPO) agonist antibody associated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                        The invention relates to a new modified single chain Fv antibody
containing at least two Heavy chain variable domains and at least two
Light chain variable domains from the same or different monoclonal
antibodies and which is an agonist for crosslinking a molecule at the
cell surface or within the cell and thereby transducing a signal into the
cell surface or within the cell and thereby transducing a signal into the
cell surface or within the cell and thereby transducing a signal into the
microorganisms transformed by and expressing the preparation of
the antibodies by culture of the transformed cells, drug compositions
containing the antibodies and an assay method for the agonist activity
of the antibodies by contacting the antibodies with cells expressing the
relevant cell surface or internal molecule. The antibodies are useful for
treatment and prevention of cancer, inflammatory disease, hormonal
disorders including diabetes, autoimmune disease, leukaemia,
dysendocrinism and blood disorders. The present sequence is a DNA
sequence encoding an antibody of the invention or a fragment thereof.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a modified antibody comprising at least 2 heavy chain variable domains and 2 or more light chain variable domains of an antibody, and exhibits thrombopoietin (TPO) agonistic effect by causing the TPO receptor to crosslink. The antibodies are useful in preventives and/or remedies for platelet reduction-associated blood diseases, thrombocytopenia following cancer chemotherapy or leukaemia. The antibody can act as a TPO signal transduction agonist by transducing a signal into cells by crosslinking a TPO receptor to exert TPO agonism. This sequence encodes a thrombopoietin (TPO) agonist antibody associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Degraded thrombopoietin agonist antibodies containing H and L chain V domains of monoclonal antibody, useful in preventives and/or remedies for blood diseases, thrombocytopenia following cancer chemotherapy or

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1,

Patent No. 601138

GENERAL INFORMATION:
APPLICANT: REFF, Mitchell E.
APPLICANT: KLOETZER, William S.
APPLICANT: MAKAMUBA, Takehiko
TITLE OF INVENTION: GAWMA-1 ANTI-HUMAN CD23 MONOCLONAL
TITLE OF INVENTION: ANTIBODIES AND USE THEREOF AS THERAPEUTICS
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: BURNS, DOANE, SWECKER & MATHIS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ZIP: 22313-1404
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                     333

Sequence 59, Application US/10039785
Patent No. 6538938
GENERAL INFORMATION:
APPLICANT: Salcedo et al.
TITLE OF INVENTION: Antibodies that Immunospecifically Bind to TRAIL
TITLE OF INVENTION: Receptors
FILE REFERENCE: PF550
CURRENT APPLICATION NUMBER: US/10/039,785
CURRENT FILING DATE: 2002-04-05
PRIOR PILING DATE: 2002-04-06
PRIOR PILING DATE: 2001-12-20
PRIOR PILING DATE: 2001-11-14
PRIOR FILING DATE: 2001-11-14
